DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 04/10/2006 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

The information disclosure statement (IDS) submitted on 01/24/2006 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

Claims 1 and 10-12 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 1, the prior art of record that predates the filing date of this application does not teach nor suggest, in the claimed combination, a magnetic sensor comprising a giant magnetoresistive effect element comprising: bias magnet film for producing a bias magnetic field in a free layer so that the direction of magnetization in each magnetic domain in the free layer can be maintained in the predetermined initial state direction; and an initializing coil that is provided in the vicinity of the free layer to initialize the magnetic field in the direction same as the direction of the bias magnetic field so that the direction of magnetization in each magnetic domain in the free layer can

assuredly be returned to initial state direction even if the direction of magnetization is disturbed by applying a strong magnetic field to the free layer.

Claim 12, the prior art of record that predates the filing date of this application does not teach nor suggest, in the claimed combination, a magnetic sensor comprising a giant magnetoresistive effect element comprising: bias magnet films provided at both ends of a free layer in the longitudinal direction of the free layer for producing a bias magnetic field in the longitudinal direction of the free layer so that the direction of magnetization in each magnetic domain in the free layer can be maintained in the predetermined direction when an external field is not present; and an initializing coils to create an initializing magnetic field for returning the direction of magnetization in each magnetic domain in the free layer can to initial state direction even if the direction of magnetization is disturbed by applying a strong magnetic field to the free layer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
